

The Wayne State University Eco Car II Team

Dear Mr./Mrs.

Wayne State University was selected to participate in the EcoCar II three-year competition. The competition provides participants with the tools and experience to become a contributing member of the automotive industry right out of college. We will design, modify and test a hybrid vehicle based on a Chevy Malibu 2013. The program involves both engineering and non-engineering students, undergraduates and graduates working as one team with a shared goal.

Our team is looking for sponsors to help us build our facilities, train our members, acquire the necessary equipment and reach our community to educate others of hybrid vehicles. As a Detroit based university we are proud of our city's heritage and hope to continue it by developing the vehicles of the future in an innovative and competitive environment.

We will appreciate if you join us in this effort, by sponsoring our team.

Our faculty advisors, officers and members will be happy to answer any questions you have and supply further information in person, phone or mail.

Sincerely,

Idan David Regev

WSU EcoCar II
